DivDat's Omni-Channel Solutions

Various Payment Methods – Accept payments via ACH, credit, debit cards, and digital wallets like Apple Pay, Google Pay, Venmo, and PayPal.

Transaction Reporting Portal – Included with all solutions is DivDat's powerful Transaction Reporting Portal which provides real-time transaction-level insights into payment details, payment solution-specific, and more.

In Person Payments – DivDat's payment solutions can be easily integrated into self-service parking kiosk. Allow your team to view all transactions flow through DivDat's real-time reconciliation system for compressive reporting with actionable insights.

Online Payments - Online hosted payment pages that facilitate both one-time and recurring payments. Customers can view, pay, and plan for specific bills among many other features.

Mobile Payments– Enable customers to make payments conveniently through a mobile experience meeting your business rules and requirements. Customers can set up recurring auto-payments, receive payment reminders, review amounts due in real time, view payment history, and more.

Text-to-Pay – Ultimate bill payment convenience at your customers fingertips. Simply text payment details to activate. Users can receive payment reminders, select multiple bills/billers to pay, and provide receipt confirmation in real-time.

Transaction Reporting Portal

Real-time Advanced Data Analytics: Accessible Anytime, Anywhere

Real-time actionable insights deliver real-world results. That's why each DivDat payment channel provides highly detailed and configurable reporting and advanced analytics, that's queryable and actionable, as soon as it's made. No need to wait for batches to complete or end of day processes to run. Simply toggle to the DivDat Transaction Reporting Portal, and take immediate action.

Treasury or cashing teams can quickly query data to see details on a specific transaction, as well as pull reports based on payment channel, user-specific accounts, and by time frame. Across solutions, DivDat's powerful back-end treasury management tools help streamline data inquiries and corresponding data returns into easy-to-use formats that can be easily leveraged by downstream systems of record.

Data is available at the payer, account, channel, department, or organization level, and the schemas are built to mirror how your team already works, and how your existing systems of records are structured, so synchronizations are a snap, and your team can focus on driving efficiencies and better servicing your consumers.

DivDat's Transaction Reporting Portal gives treasury teams the ability to:

- View real-time payment information at the payment, payer, account, channel, department, or organization level. Filter and customize your data views.
- Take immediate action on payments, including placing restrictions on specific accounts and payment types.
- Automated ACH return and chargeback notification templates, communication and management tools.
- View important collections data and trends, including revenue collected by payment channel, timeframe, and day-of-the-week to better understand and influence consumer behavior.
- Powerful cloud-based Point-of-Service system built in. A true one stop shop CSR payment portal experience.
